

# UniCredit Bank GmbH

## Key Rating Drivers

**Intrinsic Profile Drives Ratings:** UniCredit Bank GmbH's (HVB) Long-Term Issuer Default Rating (IDR) is driven by the bank's standalone credit strength, as expressed by its Viability Rating (VR). The ratings reflect a mostly wholesale banking business model focused on Germany, which has strengthened following the upgrade of its parent UniCredit S.p.A. (UC; BBB+/Positive). HVB's ratings also reflect the improved profitability, in line with developments at the parent, solid capitalisation, satisfactory asset quality, and sound funding and liquidity.

**Ratings Capped by Parent:** The bank's VR has been capped at one notch above the parent's Long-Term IDR. This reflects Fitch Ratings' view that HVB's business profile is linked to UC's risk profile, given HVB's role as the group's investment banking and markets hub. Its Stable Outlook reflects that a further upgrade of UC would not immediately trigger an upgrade for HVB due to its standalone financial profile, which is in line with its 'a-' VR.

**More Resilient Business Profile:** HVB contributes significantly to UC's strengthened business profile as the group's investment banking and markets hub, and has a key role in the group's business with multinational corporates. Fitch believes UC's improved financial profile has reduced contagion risks for HVB that could have come from a weaker performance by the parent.

**Profitability Underpins Ratings:** HVB's profitability has consistently risen in recent years, driven by higher revenue, declining operating expenses and low loan impairment charges, which compare favourably with that of its peers. We believe that HVB is well on track to generate sustainably sound profitability, with an operating profit/risk-weighted assets (RWAs) ratio above 2.5% in the medium term.

**Adequate Asset Quality:** HVB's asset quality is stable, in line with that of other German commercial banks. Its corporate-banking business entails high single-borrower concentrations, similar to domestic peers. We expect asset quality to moderately weaken due to poor economic growth in many of HVB's core markets, but for the impaired loans ratio to remain well below 3%.

**Solid Capitalisation:** Capitalisation is stronger than that of most European peers, and is well above regulatory requirements. However, our assessment factors in potential channelling of capital to the parent, which could reduce capital ratios.

**Established Funding Profile:** HVB is a covered bond issuer and has well-established deposit franchises in retail and commercial banking. Customer deposits accounted for about 50% of total funding (including derivatives) at end-1H24 despite moderate outflows in the first six months of the year. The bank's issuance of covered bonds with long average debt maturities lowers its reliance on market funding. HVB's liquidity profile is solid.

## Rating Sensitivities

### Factors that Could, Individually or Collectively, Lead to Negative Rating Action/Downgrade

We could downgrade HVB’s VR and Long-Term IDR, aligning them with UC’s, if fungibility of capital within the UniCredit group increases, resulting in a CET1 ratio below 12%, or following a downgrade of UC’s ratings. HVB’s ratings could also be downgraded if its operating profit durably declines below 1.5% of risk-weighted assets (RWAs), in combination with a significant deterioration in its asset quality.

### Factors that Could, Individually or Collectively, Lead to Positive Rating Action/Upgrade

An upgrade of HVB’s ratings would require further sustainable improvements in profitability while maintaining a strong risk profile, sound capitalisation and asset quality. This would have to be in combination with a further upgrade of UC’s Long-Term IDR as HVB’s VR is unlikely to be rated more than one notch above the parent’s Long-Term IDR.

## Other Debt and Issuer Ratings

Rating level	Rating
Deposits	A/F1
Senior preferred debt	A/F1
Senior non-preferred debt	A-
Subordinated Tier 2 debt	BBB

Source: Fitch Ratings

HVB’s ‘F2’ Short-Term IDR is the lower of the two ratings that map to a ‘A-’ Long-Term IDR. This reflects its funding and liquidity score of ‘a-’, which is not sufficient to achieve a higher rating.

The bank’s Derivative Counterparty Rating (DCR), long-term senior preferred debt and long-term deposit ratings are one notch above its Long-Term IDR to reflect the protection that could accrue to these creditors from the build-up of junior resolution debt and equity buffers. This is because we expect HVB to meet its resolution buffer requirement with senior non-preferred and more junior instruments only. For the same reason, HVB’s senior non-preferred debt rating is aligned with its Long-Term IDR.

HVB’s short-term senior preferred and deposit ratings are the lower of two ratings mapping to a ‘A’ long-term rating, because its funding and liquidity score is not sufficient to achieve a higher short-term rating. The bank’s subordinated Tier 2 debt rating is notched down twice from its VR to reflect this debt class’s higher loss severity.

The Key Rating Driver (KRD) weightings used to determine the implied VR are shown as percentages at the top. In cases where the implied VR is adjusted upwards or downwards to arrive at the VR, the KRD associated with the adjustment reason is highlighted in red. The shaded areas indicate the benchmark-implied scores for each KRD.

**VR - Adjustments to Key Rating Drivers**

The asset quality score of 'bbb+' has been assigned below the 'a' implied category score due to the following adjustment reason: concentration (negative).

The capitalisation and leverage score of 'a-' has been assigned below the 'aa' implied category score due to the following adjustment reason: internal capital generation and growth (negative).

## Company Summary and Key Qualitative Factors

### Business Profile

#### Leading Corporate Banking Franchise in Wealthy Areas, Limited Retail Presence

HVB is one of Germany’s largest banks, and UniCredit’s investment banking and markets hub, linking HVB’s business profile with the parent. It is a leading arranger of bonds, loans and Schuldscheine – German promissory notes – for large German corporates, and has a well-entrenched SME franchise in its core regions of Bavaria and northern Germany. HVB’s corporate banking division covers separately domestic SMEs and large corporates.

We believe HVB’s SME banking franchises and operations are more independent from its parent than its large corporate business, which is integrated in UniCredit and benefits from the group’s international network and leading market positions in central and eastern Europe. HVB’s ability to do business could be affected if UniCredit’s risk profile deteriorates materially, resulting in a loss of corporate clients, derivative counterparties and investors. However, this risk has reduced following the improved profile of the parent and should help HVB to further strengthen and build its own market presence.

HVB’s retail and private banking franchise is less developed than its corporates segment, but is a solid pillar of its deposit funding and helps maintain a moderate reliance on wholesale funding. HVB lacks critical mass nationwide and its market shares are concentrated in the wealthy regions of Bavaria and northern Germany. However, HVB has become one of the most profitable German banks since the implementation of UniCredit’s 2022–2024 strategic plan with a strong focus on cost efficiency, process optimisation, streamlining of the product range, and digitalisation. This underpins our ‘a-’ business profile score.

#### Strategic Focus on Advisory, Wealth Management and Digitisation

The bank has optimised its branch network with a view to be more advisory-centric and enhance digital product offerings. HVB aims to expand its wealth-management business from a low base and add visibility by leveraging on its relations with SMEs, but building up scale could prove challenging in the highly competitive German private banking market. The segment generates comparably smaller but rising profits, still limiting more meaningful profit diversification beyond corporate banking.

The change of HVB’s legal form from a stock corporation (Aktiengesellschaft) to a limited liability company (Gesellschaft mit begrenzter Haftung, GmbH) at end-2023, despite being unusual for a large bank, did not affect the bank’s reputation, franchise, customer behaviour and staff stability.

### Risk Profile

#### Disciplined Risk Profile, Transfer of Most Trading Activities

HVB’s risk profile reflects the corporate-centric business model, including investment banking and mainly client-induced trading activities, which make it comparably more vulnerable to economic swings. Corporate customers dominate its loan book (around 60% of total customer loans at end-1H24). Together with the retail segment, credit and counterparty risks represent about three quarters of RWAs at end-1H24.

HVB’s risk strategy, controls and limits are derived from UniCredit’s risk appetite framework. Underwriting standards and security investment guidelines are consistent with its business profile and also broadly in line with those of German peers. The complexity of HVB’s products is also in line with others commercial banks and reflects a strong capacity to provide tailor-made investment solutions, which are an integral part of the bank’s offerings in corporates and retail banking.

UniCredit's client selectivity, high interest rates and muted loan demand, particularly for mortgage loans, have led to moderate loan book deleveraging over the past 18 months. HVB's customer loans grew by 0.8% in 1H24 after their 3.6% decline in 2023, which was due to an efficiency review of the loan book and Germany's weak economic environment. We expect a modest but slow pick-up in activity across German industry sectors to start stimulate the banking's lending and business volumes next year. The rating structure of HVB's loan book was broadly stable in 6M24.

Interest rate risk in HVB's banking book is largely hedged. In a scenario of a 200bp upward interest rates parallel shift, the economic value of the bank's equity would be reduced by EUR1.7 billion, or 9.2%. The group has a robust, centralised governance. Traded market risks are low and managed conservatively. In July 2024 HVB has started to transfer some parts of its trading activities to the parent, a process that will likely continue up until end-2025. The operational benefits, namely a reduction in risks, profit volatilities and complexity, drive the positive outlook on HVB's risk profile score.

HVB caps its upstream exposure to UniCredit well below the limit of 100% of regulatory total capital set by the German regulator to mitigate contagion risk. However, direct or indirect exposure to UniCredit accounted for a significant proportion of HVB's EUR10 billion Italian exposure at end-1H24.

## Financial Profile

### Asset Quality

#### Asset Quality Resilient; but Mild Deterioration Expected

HVB's impaired loans ratio of 2.3% at end-1H24 is slightly higher than some of its German peers', reflecting the bank's strong corporate focus, but has remained broadly stable over the past two years despite a weak economic environment in Germany. The degree of corporate and sector resilience reflects HVB's solid underwriting standards and some tightening measures over the past 18 months. HVB's stock of non-performing loans (Stage 3) increased only marginally in 1H24 to EUR2.9 billion (2023: EUR2.8 billion), remaining below the pandemic-driven levels of above EUR3 billion in 2020 and 2021. Our asset quality assessment also reflects above-average concentration risks, as evidenced by HVB suffering from two larger defaults in 6M24. HVB's previously high level of Stage 2 loans declined markedly from EUR20.8 billion to EUR14.2 billion (11% of gross customer loans in 1H24) due to disposals and a significant transfer of loans back into Stage 1.

We expect HVB's asset quality to moderately deteriorate in the next 12 to 24 months, although the impaired loans ratio should remain below 3%. We believe that structural factors weighing on the German economy and the corporate sector such as high energy costs, shortage of qualified labour, a loss of competitiveness and bureaucratic burden outweigh the modest economic recovery we expect for next year. We view energy intensive sectors as the most vulnerable, including automotive (EUR10.6 billion exposure), machinery and metals (EUR11.6 billion) and chemistry.

HVB also has a significant exposure to real estate (EUR33 billion; 13% of its credit default risk exposure at end-1H24), of which around EUR19 billion relates to commercial real estate. This segment has performed reasonably well so far, and in line with other domestic real estate lenders despite the impact of higher interest rates and declining valuations, and contrary to expectations. Fitch understands that a high share of fixed contracts with long maturities and moderate loan-to-value ratios (LTVs), typically below 60%, mitigate loan book risks. The share of loans with an LTV above 80% is contained below 5%.

The bank adopts a conservative level of loan loss reserves, and its loan loss allowance coverage ratio of above 60% remains above peers'. HVB applies conservative management overlays (end-1H24: EUR162 million) for geopolitical risks and commercial real estate. We expect a higher use of such post-model provision adjustments to mitigate rising loan loss vulnerability.

### Earnings and Profitability

#### Restructuring and Efficiency Gains Drive Above-Average Profitability

HVB's 1H24 results were well ahead of Fitch's initial 2024 forecasts and superior to German peers. We have therefore revised our operating profit/RWAs ratio forecast for the bank to around 4.1% for 2024 (from 2.7%). We expect that HVB will generate an operating profit/risk-weighted assets ratio of above 2.5% on a sustained basis in the next two years (previously above 1.5%).

Our revision reflects the positive impact of the bank's restructuring efforts and much more risk-conscious pricing, which drove down average RWAs by almost 20% since end-2020, thus improving HVB's profitability metrics. Most importantly, the bank's rigorous cost discipline, which has lowered its cost/income ratio (end-1H24: 40%; end-2020: 68%), supports its structural profitability. This included sizeable branch closures and staff reduction without harming its franchise. We believe that the bank's cost performance is sustainable and will manifest its cost leadership among German banks with similar operating models.

HVB's net operating profit increased by 11% year-on-year (yoy) in 1H24, to EUR1.6 billion. The result was driven by solid operating revenues, particularly trading income (up 22% yoy), and still moderate, albeit increasing, loan impairment charges (LICs). We expect LICs to grow and weigh on HVB's profit in 2H24 and the next two years, including due to the usual seasonal moderation of activities towards year-end. Nevertheless, cost of risk should remain under control and within in the group's guidance of 20bp–25bp. We therefore expect HVB's profitability in 2024 and 2025 to remain better than its domestic peers.

HVB expects the transfer of a substantial part of its trading activities to the parent to support its long-term profitability, capital ratios and the leverage ratio, while reducing risks, profit volatility and operational complexity. We cannot finally assess the full impact of this project on the bank's profitability, but assume a broad balance of the impact on revenues and RWAs, although with less revenue diversification.

**Capitalisation and Leverage**

**Strong Capital Metrics Vulnerable to Changes in Group Capital Allocation**

HVB's CET1 ratio (end-1H24: 23.3%; end-2023: 22.7%) increased to well above that of both German and European peers. The ratio of loan loss allowances to impaired loans is above average, and the CET1 ratio provides a very comfortable buffers over regulatory requirements. The strengthened CET1 ratio was driven by declining RWAs (-2.5% in 6M24) and slow loan growth in its corporate lending exposures amid Germany's weak operating environment. Additionally, HVB has increased capital efficiency by using securitisations and a more efficient deployment of collateral.

HVB holds a substantial part of the group's equity. Therefore, our assessment of HVB's capitalisation and leverage factors in a long-term risk of channelling capital from HVB to UniCredit, reflecting the parent's single-point-of-entry resolution strategy. Due to HVB's resolution buffer requirements, we believe that, should it happen, this would result in a substitution of HVB's excess CET1 with senior non-preferred, and more junior, debt instruments issued to the parent.

The upstreaming risk has reduced as the parent's profitability has improved. We expect that, even after a potential upstreaming of capital, HVB's CET1 capital would remain sound and comfortably exceed regulatory requirements. This is because the bank considers sound capitalisation important given its markets business, which can be confidence-sensitive, and because it needs to retain its ability to commit capital for large transactions and mitigate the fairly high single-name concentrations inherent in its loan book.

**CET1 Ratio**

Source: Fitch Ratings, Fitch Solutions, banks

**Gross Loans/Customer Deposits**

Source: Fitch Ratings, Fitch Solutions, banks

**Funding and Liquidity**

**Well-Diversified Funding Sources, Sound Liquidity**

HVB's diversified funding underpins its role as UniCredit's self-sufficient liquidity centre for Germany. This means that HVB manages its funding and liquidity profile on its own but in accordance with the group-wide framework to optimise market access and funding costs.

Customer deposits are HVB's dominant funding source. The bank's loans/deposits ratio rose to 98% at end-1H24 due to a 5.7% decrease in customer deposits, while loan volumes increased slightly. We forecast the loans/deposits ratio to increase further in the medium term, but for the four-year average to remain below 100%, as loan growth resumes and deposits gathering reduces with lower rates.

HVB has material reliance on market funding, but nearly 75% of its outstanding wholesale funding at end-1H24 is represented by long-dated covered bonds mainly backed by mortgage loans. These are supplemented by smaller

private placements, registered notes and structured retail issues. The focus and credit quality on secured lending mitigates contagion risks should UniCredit's credit profile markedly deteriorate.

Debt market issuance volumes in 2024 are well below the previous year's EUR5.1 billion because of the bank's solid liquidity position. By the end of June 2024, HVB Group had raised EUR1.5 billion longer-term funding (1H23: EUR6.1 billion).

HVB comfortably meets its 2024 interim internal minimum requirements for own funds and eligible liabilities (MREL) of 26.9% of RWAs (including the combined buffer requirement at end-1H24) through SNP and more junior debt underwritten by the parent. HVB's MREL requirement must be met entirely with SNP or more junior debt, because instruments eligible for group internal MREL are required to be more junior than (or pari passu with) notes placed outside of the group.

HVB's sound liquidity is underpinned by a large stock of high-quality liquid assets. These totalled EUR59 billion, on average, in the past 12 months at end-1H24, equivalent to about 21% of total assets. Additional liquidity can be generated by further covered bond issuance given overcollateralisation of the mortgage bonds cover pool of about 28% end-1H24. Like its peers, HVB smoothly managed full repayments of the ECB's TLTRO funding.

### Additional Notes on Charts

The forecasts in the charts in this section reflect Fitch's forward view on the bank's core financial metrics per Fitch's Bank Rating Criteria. They are based on a combination of Fitch's macro-economic forecasts, outlook at the sector level and company-specific considerations. As a result, Fitch's forecasts may materially differ from the guidance provided by the rated entity to the market.

To the extent Fitch is aware of material non-public information with respect to future events, such as planned recapitalisations or merger and acquisition activity, Fitch will not reflect these non-public future events in its published forecasts. However, where relevant, such information is considered by Fitch as part of the rating process.

Black dashed lines represent indicative quantitative ranges and implied scores for Fitch's core financial metrics for banks operating in the environments that Fitch scores in the 'aa' category. Light-blue columns represent Fitch's forecasts. Peer average includes Landesbank Baden-Wuerttemberg (VR: bbb+), Bayerische Landesbank (bbb+), Deutsche Bank AG (a-), ABN AMRO Bank N.V. (a).

The colours indicate the weighting of each KRD in the assessment.

Higher influence Moderate influence Lower influence

### High Support Propensity Constrained by HVB’s Size

HVB’s Shareholder Support Rating is two notches below UC’s Long-Term IDR because the parent’s ability to provide support is constrained by HVB’s large size. Under the group’s resolution strategy (single-point-of entry), the solvency support that HVB would be likely to require is high relative to the capital available in the rest of the group. UC’s strong propensity to support primarily reflects HVB’s role as the group’s investment-banking hub and substantial corporate banking operations in Europe’s largest economy.

## Environmental, Social and Governance Considerations

### FitchRatings UniCredit Bank GmbH

Banks  
Ratings Navigator

#### Credit-Relevant ESG Derivation

UniCredit Bank GmbH has 5 ESG potential rating drivers

- UniCredit Bank GmbH has exposure to compliance risks including fair lending practices, mis-selling, repossession/foreclosure practices, consumer data protection (data security) but this has very low impact on the rating.
- Governance is minimally relevant to the rating and is not currently a driver.

Exposure to Environmental Impacts	2	Impact of extreme weather events on assets and/or operations and corresponding risk appetite & management; catastrophe risk; credit concentrations	Business Profile (incl. Management & governance); Risk Profile; Asset Quality	1

#### How to Read This Page

ESG relevance scores range from 1 to 5 based on a 15-level color gradation. Red (5) is most relevant to the credit rating and green (1) is least relevant.

The Environmental (E), Social (S) and Governance (G) tables break out the ESG general issues and the sector-specific issues that are most relevant to each industry group. Relevance scores are assigned to each sector-specific issue, signaling the credit-relevance of the sector-specific issues to the issuer's overall credit rating. The Criteria Reference column highlights the factor(s) within which the corresponding ESG issues are captured in Fitch's credit analysis. The vertical color bars are visualizations of the frequency of occurrence of the highest constituent relevance scores. They do not represent an aggregate of the relevance scores or aggregate ESG credit relevance.

The Credit-Relevant ESG Derivation table's far right column is a visualization of the frequency of occurrence of the highest ESG relevance scores across the combined E, S and G categories. The three columns to the left of ESG Relevance to Credit Rating summarize rating relevance and impact to credit from ESG issues. The box on the far left identifies any ESG Relevance Sub-factor issues that are drivers or potential drivers of the issuer's credit rating (corresponding with scores of 3, 4 or 5) and provides a brief explanation for the relevance score. All scores of 4 and 5 are assumed to reflect a negative impact unless indicated with a "+" sign for positive impact. Scores of 3, 4 or 5 and provides a brief explanation for the score.

Classification of ESG issues has been developed from Fitch's sector ratings criteria. The General Issues and Sector-Specific Issues draw on the classification standards published by the United Nations Principles for Responsible Investing (PRI), the Sustainability Accounting Standards Board (SASB), and the World Bank.

#### Social (S) Relevance Scores

General Issues	S Score	Sector-Specific Issues	Reference	S Relevance
Human Rights, Community Relations, Access & Affordability	2	Services for underbanked and underserved communities; SME and community development programs; financial literacy programs	Business Profile (incl. Management & governance); Risk Profile	5
Customer Welfare - Fair Messaging, Privacy & Data Security	3	Compliance risks including fair lending practices, mis-selling, repossession/foreclosure practices, consumer data protection (data security)	Operating Environment; Business Profile (incl. Management & governance); Risk Profile	4
Labor Relations & Practices	2	Impact of labor negotiations, including board/employee compensation and composition	Business Profile (incl. Management & governance)	3
Employee Wellbeing	1	n.a.	n.a.	2
Exposure to Social Impacts	2	Shift in social or consumer preferences as a result of an institution's social positions, or social and/or political disapproval of core banking practices	Business Profile (incl. Management & governance); Financial Profile	1

#### Governance (G) Relevance Scores

General Issues	G Score	Sector-Specific Issues	Reference	G Relevance
Management Strategy	3	Operational implementation of strategy	Business Profile (incl. Management & governance)	5
Governance Structure	3	Board independence and effectiveness; ownership concentration; protection of creditor/stakeholder rights; legal/compliance risks; business continuity; key person risk; related party transactions	Business Profile (incl. Management & governance); Earnings & Profitability; Capitalisation & Leverage	4
Group Structure	3	Organizational structure; appropriateness relative to business model; opacity; intra-group dynamics; ownership	Business Profile (incl. Management & governance)	3
Financial Transparency	3	Quality and frequency of financial reporting and auditing processes	Business Profile (incl. Management & governance)	2
				1

#### CREDIT-RELEVANT ESG SCALE

How relevant are E, S and G issues to the overall credit rating?

Score	Relevance Description
5	Highly relevant, a key rating driver that has a significant impact on the rating on an individual basis. Equivalent to "higher" relative importance within Navigator.
4	Relevant to rating, not a key rating driver but has an impact on the rating in combination with other factors. Equivalent to "moderate" relative importance within Navigator.
3	Minimally relevant to rating, either very low impact or actively managed in a way that results in no impact on the entity rating. Equivalent to "lower" relative importance within Navigator.
2	Irrelevant to the entity rating but relevant to the sector.
1	Irrelevant to the entity rating and irrelevant to the sector.

The highest level of ESG credit relevance is a score of '3', unless otherwise disclosed in this section. A score of '3' means ESG issues are credit neutral or have only a minimal credit impact on the entity, either due to their nature or the way in which they are being managed by the entity. Fitch's ESG Relevance Scores are not inputs in the rating process; they are an observation on the relevance and materiality of ESG factors in the rating decision. For more information on Fitch's ESG Relevance Scores, visit <https://www.fitchratings.com/topics/esg/products#esg-relevance-scores>.

## SOLICITATION & PARTICIPATION STATUS

For information on the solicitation status of the ratings included within this report, please refer to the solicitation status shown in the relevant entity's summary page of the Fitch Ratings website.

For information on the participation status in the rating process of an issuer listed in this report, please refer to the most recent rating action commentary for the relevant issuer, available on the Fitch Ratings website.

## DISCLAIMER & DISCLOSURES

All Fitch Ratings (Fitch) credit ratings are subject to certain limitations and disclaimers. Please read these limitations and disclaimers by following this link: <https://www.fitchratings.com/understandingcreditratings>. In addition, the following <https://www.fitchratings.com/rating-definitions-document> details Fitch's rating definitions for each rating scale and rating categories, including definitions relating to default. Published ratings, criteria, and methodologies are available from this site at all times. Fitch's code of conduct, confidentiality, conflicts of interest, affiliate firewall, compliance, and other relevant policies and procedures are also available from the Code of Conduct section of this site. Directors and shareholders' relevant interests are available at <https://www.fitchratings.com/site/regulatory>. Fitch may have provided another permissible or ancillary service to the rated entity or its related third parties. Details of permissible or ancillary service(s) for which the lead analyst is based in an ESMA- or FCA-registered Fitch Ratings company (or branch of such a company) can be found on the entity summary page for this issuer on the Fitch Ratings website.

In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed. Fitch Ratings makes routine, commonly-accepted adjustments to reported financial data in accordance with the relevant criteria and/or industry standards to provide financial metric consistency for entities in the same sector or asset class.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.

Fitch Ratings, Inc. is registered with the U.S. Securities and Exchange Commission as a Nationally Recognized Statistical Rating Organization (the "NRSRO"). While certain of the NRSRO's credit rating subsidiaries are listed on Item 3 of Form NRSRO and as such are authorized to issue credit ratings on behalf of the NRSRO (see <https://www.fitchratings.com/site/regulatory>), other credit rating subsidiaries are not listed on Form NRSRO (the "non-NRSROs") and therefore credit ratings issued by those subsidiaries are not issued on behalf of the NRSRO. However, non-NRSRO personnel may participate in determining credit ratings issued by or on behalf of the NRSRO.
